The gene can be used to generate fusion proteins by linking to the gene to a human immunoglobulin re portion (e.g. AAZ24802) for increasing the stability of the fused protein as compared to the human protein only. The invention relates to 95 novel genes and their fragments (nucleic acid sequences: AAZ24811-Z24907; amino acid sequences AAY41308-Y41404) which are useful for preventing, treating or ameliorating medical conditions e.g. by protein or gene therapy. Also, pathological conditions can be diagnosed by determining the amount of the new polypoptides in a sample or by determining the presence of mutations in the new polynucleotides. Specific uses are described for each of the 95 polynucleotides, based on which tissues they are most highly expressed in (see AAZ24811 for described uses)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          08-JUL-1999;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         0;
```

The invention relates to primers for synthesising full length cDNA clones, 830 cDNA molecules encoding a human protain have been isolated and nucleotide sequences of 5'- and 3'-ends of the cDNA molecules have been determined. Primers for synthesising the full length cDNA are used

useful

The full length clones were obtained by construction of full length enriched cDNA libraries that were synthesised by the oligo-capping method. The primers enable the production of the full length cDNA easily without any special methods. The present sequence is a polypeptide encoded by a full length human cDNA of the invention. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in CD-ROM format directly from EPO
                   This invention describes the isolation of a novel human secreted protein, zsig46 encoded by a gene on chromosome 13 which is mainly expressed in the thyroid. This product can be used to study secretion of proteins from cells and also to treat or prevent deficient expression of zsig46, which may be associated with thyroid diseases (e.g. hypothyroidism, Graves' disease, thyrotoxicosis, thyroid cancer etc.) or with diseases that involve genes in the same region of chromosome 13 (e.g. Hirschsprung's disease, neuronal ceroid-lipofucinosis, Wilson disease and Reiger syndrome). Antibodies and other binding proteins, are used as immunoassay reagents to detect zsig46 or cells expression it, e.g. for assessing through the control of zsig46, to screen expression libraries, to neutralise zsig46 activity, and to deliver toxins, radiostopes etc. for he weed
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Secreted protein; zsig46; human; chromosome 13; thyroid; disease hypothyroidism; Graves; disease; thyrotoxicosis; thyroid cancer; Hirschsprung; s disease; neuronal ceroid-lipofucinosis; Wilson di Reiger syndrome; immunoassay; detection; anti-idiotypic antibody
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          proteins - used for diagnosis and true
diseases involving genes on chromosome
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          New secreted polypeptide, zsig46, and its fragments, proteins - used for diagnosis and treatment of thyro
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        N-PSDB;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Sequence 346 AA;
Sequences AAU29380-AAU29509 represent human G protein-coupled receptor (GPCR) polypeptides of the invention. The proteins and the DNA sequence encoding them can be used to identify compounds which bind to GPCR polypeptides and in screening for compounds that modulate GPCR activity By screening a human subject for the presence of mutations in GPCR DNA, GPCR-related disorder or a genetic predisposition can be diagnosed. The sequences can also be used for treatment and prevention of mental
                                                                                                                                                                      Nucleic acid encoding G-protein coupled receptors, useful prevention, diagnosis and treatment of mental disorders.
                                                                                                                                                                                                                                                                                                                                                                                                                29-MAR-2000;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               hyperproliferative as those caused by
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Gaps
                                               for mammal.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ۲,
```

The invention

describes

an isolated

nucleic

acid

 $\widehat{\Xi}$

comprising

Claim 27; Page 44; 216pp; English.

(C (I) is used to produce a recombinant nGPRC-x polypeptide. A polypeptide c encoded by (I) is used to induce an immune response in a mammal. nGPRC-x is used to identify a compound that binds to it and/or modulates it's c activity. (I) is used to identify animal homologues of nGPCR-x. (I) can it is used to diagnose a human subject as having a brain or genetic c predisposition disorder, such a mental disorder. (I) is used to screen it is nGPCR-x related disorder including thyroid disorders (e.g. c thyreotoxicosis, myxoedema), renal failure, inflammatory conditions (e.g. incomposition), diseases related to cell differentiation and incomposition and concers, (NS disorders, viral infections (e.g. Human immunodeficiency virus), metabolic and cardiovascular disorders (e.g. diabetes, obesity, c anorexia, cardiomyopathies), porliferative diseases and cancers (e.g.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Query Match
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          psoriasis, lung cancer), hormonal disorders, sexual dysfunction and hereditary mental disorders in a human patient. A host cell comprising (I) is used to screen for a modulator of nGPCR-x activity. nGPCR-x is used to identify compounds that can treat mental disorders. The polypeptide encoded by (I) is used to purify a G protein from a sample. This is the amino acid sequence of a novel G protein coupled receptor (nGPCR-x) protein described in the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 antibacterial; antiallergic; dermatological; haemostatic; antiasthmatic; thrombolytic; immunogen; antibody; gene therapy; neurological disorder; Parkinson's disease; inflammatory disorder; cancer; asthma; osteoporosis;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Human; novel protein; Antianaemic; osteopathic; antiinflammatory; immunomodulatory; cytostatic; neuroprotective; vulnerary; nootropic; anticonvulsant; antiarthritic; cerebroprotective; antiiungal; antiviral;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Human novel protein #33.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Sequence 192 AA;
                                                                                                                     Isolated polypeptides useful for treating anti-inflammatory diseases, nervous system disorders, and for regenerating bone and cartilage.
                                                                                                                                                                                                                                           WPI; 2001-451939/48

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Š
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   CC their active domains. The polypucides, polynucleotides and antibodies craised against the polypeptides, polynucleotides and antibodies command and prevention of disorders caused by the aberrant protein command and prevention of disorders caused by the aberrant protein command and prevention of disorders caused by the aberrant protein command and prevention of disorders caused by the aberrant protein commands which bind to the polypeptides care used to identify compounds which bind to the polypeptides complete sequencing, for chromosome or gene mapping, in the production of compounds and in generating anti-sense DNA or RNA and in generating proteins, and in generating anti-sense DNA or RNA and in generating anti-sense plan or response to a commour, in assays to determine biological activity, to raise complete sequencing to the invention may also be used to target drugs to a complete sequent and/or nerve tissue, wound healing, treating platelet contraceptive, treating osteoporosis and survival of stem cells, as a contraceptive, treating osteoporosis and osteoarthritis, anaemia, contraceptive, treating osteoporosis and osteoarthritis, anaemia, promoting contraceptive, treating osteoporosis and osteoarthritis, anaemia, promoting tringal infection or from autoimmunity, cancer, allergy, asthma, graftcontraces, personse, carema, haemophilia, thrombosis, anti-inflammatory contents of the invention of the invention. The present sequence contraces a protein of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Query Match

The methods and compositions of the present invention are useful for identifying, diagnosting, monitoring, staging, imaging and treating lung cancer and non-cancerous diseases of the lung. They are also used for identifying lung tissue, monitoring and identifying and/or designing antagonists of the polypeptide of the invention, gene therapy, production of transgenic animals and production of engineered lung tissue for treatment and research. This is the amino acid sequence of a lung specific nucleic acid
                                                                                                              or veterinary medicine, particularly where avilamycins. The present aureus. (I) are more hydrophilic than known avilamycins. The present sequence is that of an avilamycin synthesis enzyme from the Streptomyces sequence is that of an avilamycin A biosynthetic gene cluster (ABZ37515-
                                                                                                                                                                    The invention relates to avilamycin derivatives (I) with antibacterial, virucide, protozoacide and fungicide activity. (I) are useful for treatment of infections (bacterial, viral, protozoal or fungal), in hum or veterinary medicine, particularly where caused by Staphylococcus aureus. (I) are more hydrophilic than known avilamycins. The present

                                                                                                                                                                                                                                                                                                                 This invention relates to a novel method for identifying essential genes for survival or virulence of mycobacteria species. The method comprises aligning the genomic sequence of a first mycobacterium species on a genomic sequence of a second mycobacterium species and selecting a polynucleotide sequence that is highly conserved in both genomes with no counterparts in other bacterial genomic sequences and that corresponds to an essential gene for the survival or virulence of mycobacterium species. The method of the invention is useful for detecting M. tuberculosis or M. leprae infection. The method reduces the number of potential new targets and protective antigens for new drugs and vaccine compositions to treat
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Identifying and selecting genes for survival or virulence of mycobacteria by a comparative genomic analysis of the sequences of Mycobacterium tuberculosis and M. leprae.

                                                                                              activity. Pharmaceutical compositions comprising the NOVX proteins or nucleic acid molecules or NOVX antibodies are useful for preventing or treating a disorder associated with aberrant NOVX expression or activity e.g. cancer, hypertension, atherosclerosis, cardiomyopathy or bronchial asthma. The products of the invention can be used for gene therapy or in a vaccine. ABU65211-ABU65218 represent the NOVX polypeptides encoded by

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         (ABB14678-ABB18001) useful for preventing, treating or ameliorating medical conditions e.g. by protein or gene therapy. The genes are isolated from a range of human tissues disclosed in the specification. The nucleic acids, proteins, antibodies and (ant) agonists are useful in the diagnosis, treatment and prevention of: (a) cancer, e.g. breast and the cancers of the adrenal gland, bone, bone marrow, to breast, gastrointestinal tract, liver, lung, or urogenital; (b) immune through the cancers allergies, autoimmune haemolytic anamenia, autoimmune thyroiditis, diabetes mellitus, Crohn's disease, multiple sclerosis, rheumatoid arthritis and ulcerative colitis; (c) cardiovascular disorders such as myocardial ischaemias; (d) wound healing; (e) neurological diseases e.g. cerebral anoxia and epilepsy; and (f) infections. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIFO at ftp.wipo.int/pub/published_pct_sequences
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         εκακοδοδοδοδοδοδοδοδοκικά
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ಕ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ₹
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            10-JAN-2000
      This sequence represents a toxic thioredoxin fusion aptamer, and was identified using the method of the invention. The method is for the identification of an aptamer (I) inhibiting either growth, viability or virulence of an organism, or the biological function of an essential
                                                                                                                                                                                                                New aptamers that inhibit growth, viability or virulence of organisms, potentially useful as antibacterial and antiviral agents.
                                                                                                                                                                                                                                                                                                                                                                         Mekalanos JJ,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  target molecule (ETM), and comprises: (i) transforming cells with an aptamer expression library (AEL), in which expression is tightly regulated; (ii) inducing expression of (I); (iii) identifying cells that express active (I); and (iv) isolating (I)-encoding DNA from these cells. (I) i.e. random combinatorial peptides, and their mimics, are: (i) particularly potential antibacterial or antiviral agents (including inhibitors of human immune deficiency virus protease) but may also be used for treating diseases that involve cellular proliferation, e.g. cancer, autoimmune disease and psoriasis; (ii) are used to define potential new targets (or their inhibitors); and (iii) used to produce
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Sequence 34

The invention relates to isolated polynucleotide (I) and polypeptide (II) sequences. (I) is useful as hybridisation probes, polymerase chain reaction (PCR) primers, oligomers, and for chromosome and gene mapping, and in recombinant production of (II). The polynucleotides are also used in diagnostics as expressed sequence tags for identifying expressed genes. (I) is useful in gene therapy techniques to restore normal activity of (II) or to treat disease states involving (II). (II) is useful for generating antibodies against it, detecting or quantitating a polypeptide in tissue, as molecular weight markers and as a food supplement. (II) and its binding partners are useful in medical imaging of sites expressing (II). (I) and (II) are useful for treating disorders involving aberrant protein expression or biological activity. The

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             맑
                                                                       genes. (I) is useful in gene therapy techniques to restore normal cativity of (II) or to treat disease states involving (II). (II) is custful for generating antibodies against it, detecting or quantitating a colypeptide in tissue, as molecular weight markers and as a food complement. (II) and its binding partners are useful in medical imaging of sites expressing (II). (I) and (II) are useful for treating disorders convolving abstrant protein expression or biological activity. The colypeptide and polymucleotide sequences have applications in colypeptide and polymucleotide sequences have applications in colypeptides, forensics, gene mapping, identification of mutations compossible for genetic disorders or other traits to assess biodiversity and to produce other types of data and products dependent on DNA and camino acid sequences. ABG00010-ABG30377 represent novel human diagnostic patent did not appear in the printed specification, but was obtained in coloring format directly from WIPO at the coloring format directly from WIPO at the coloring format directly from WIPO at the coloring format directly from WIPO at the coloring format directly from WIPO at the coloring format directly from WIPO at the coloring format directly from WIPO at the coloring format directly from WIPO at the coloring format directly from WIPO at the coloring format directly from WIPO at the coloring format directly from WIPO at the coloring format directly from WIPO at the coloring format directly from WIPO at the coloring format directly from WIPO at the coloring format directly from WIPO at the coloring format directly from WIPO at the coloring format directly from WIPO at the coloring format directly from WIPO at the coloring format directly from WIPO at the coloring format directly from WIPO at the coloring format directly from WIPO at the coloring format directly from WIPO at the coloring format directly from WIPO at the coloring format directly from WIPO at the coloring format directly from WIPO at the coloring format directly from WI
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         New isolated polynucleotide and encoded polypeptides, useful in diagnostics, forensics, gene mapping, identification of mutations responsible for genetic disorders or other traits and to assess
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Human; chromosome mapping; gene mapping; gene therapy; forensic food supplement; medical imaging; diagnostic; genetic disorder.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ABG07764;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         reaction (PCR) primers, oligomers, and for chromosome and gene mapping, and in recombinant production of (II). The polynucleotides are also use in diagnostics as expressed sequence tags for identifying expressed
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           N-PSDB; AAS71951.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    31-MAR-2000; 2000US-00540217.

     Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      BC
